

Francisco Filipe – Cover Letter

Dear Hiring Manager,

I am a Python Backend Engineer with 5+ years of fully remote experience building and scaling distributed systems at a UK-based SaaS company. I am writing to express my interest in joining your engineering team.

In my current role at Little Forest, I led the re-architecture of a legacy Java crawling platform into a Python-based distributed system, scaling it from 100,000 to over 100 million requests. This involved designing high-performance data extraction pipelines, implementing distributed task processing with Celery and Redis, optimising PostgreSQL databases at scale, and containerising core services with Docker. I manage the Linux production infrastructure end-to-end and have built RESTful APIs supporting both internal services and third-party integrations.

Beyond the technical work, I take ownership of systems from design through to deployment and ongoing maintenance. I am comfortable working autonomously in remote-first environments, collaborating across time zones, and contributing to engineering standards through code review and documentation.

My core stack is Python, Celery, Redis, and PostgreSQL, with additional experience in Flask, Node.js, Docker, Linux, and cloud platforms including AWS, GCP, and Azure. I hold an MSc in Computer Engineering from the University of Trás-os-Montes and Alto Douro, where my thesis was developed directly in collaboration with Little Forest.

I am currently looking for a fully remote backend engineering role at a focused team where I can continue working on technically challenging, data-intensive systems. I am open to both employment and B2B contractor arrangements.

I would welcome the opportunity to discuss how my experience aligns with your needs.

Kind regards,

Francisco Filipe
